CD56 (NCAM1) Rabbit Polyclonal Antibody – TA378947

Background:

This gene encodes a cell adhesion protein which is a member of the immunoglobulin superfamily. The encoded protein is involved in cell-to-cell interactions as well as cell-matrix interactions during development and differentiation. The encoded protein has been shown to be involved in development of the nervous system, and for cells involved in the expansion of T cells and dendritic cells which play an important role in immune surveillance. Alternative splicing results in multiple transcript variants.

Synonyms: CD56; MSK39; N-CAM-1; NCAM; NCAM-1
