GRIGENE NRXN3 Rabbit Polyclonal Antibody – TA379323

Background:This gene encodes a member of a family of proteins that function in the nervous system as
receptors and cell adhesion molecules. Extensive alternative splicing and the use of
alternative promoters results in multiple transcript variants and protein isoforms for this
gene, but the full-length nature of many of these variants has not been determined.
Transcripts that initiate from an upstream promoter encode alpha isoforms, which contain
epidermal growth factor-like (EGF-like) sequences and laminin G domains. Transcripts
initiating from the downstream promoter encode beta isoforms, which lack EGF-like
sequences. Genetic variation at this locus has been associated with a range of behavioral
phenotypes, including alcohol dependence and autism spectrum disorder.

Synonyms: KIAA0743; MGC176711
