Background: Phosphoinositide 3-kinases (PI3Ks) phosphorylate inositol lipids and are involved in the

immune response. The protein encoded by this gene is a class I catalytic subunit of PI3K. Like other class I catalytic subunits (p110-alpha p110-beta, and p110-delta), the encoded protein binds a p85 regulatory subunit to form PI3K. This gene is located in a commonly deleted segment of chromosome 7 previously identified in myeloid leukemias. Several transcript

variants encoding the same protein have been found for this gene.

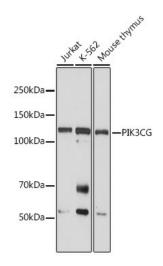

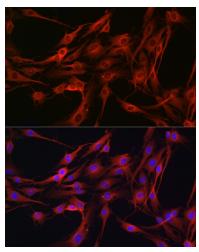

Synonyms:

p110-gamma; p120-PI3K; PI3-kinase; PI3CG; PI3K; PI3Kgamma; PIK3; PTDINS-3-kinase
