Background: Secreted phospholipase A2 (sPLA2) enzymes liberate arachidonic acid from phospholipids for

production of eicosanoids and exert a variety of physiologic and pathologic effects. Group XII

sPLA2s, such as PLA2G12A, have relatively low specific activity and are structurally and

functionally distinct from other sPLA2s (Gelb et al., 2000 [PubMed 11031251]).
