#### **GRIGENE** RASAL1 Rabbit Polyclonal Antibody – TA380725S

Background:The protein encoded by this gene is member of the GAP1 family of GTPase-activating<br/>proteins. These proteins stimulate the GTPase activity of normal RAS p21 but not its<br/>oncogenic counterpart. Acting as a suppressor of RAS function, the protein enhances the<br/>weak intrinsic GTPase activity of RAS proteins resulting in the inactive GDP-bound form of<br/>RAS, thereby allowing control of cellular proliferation and differentiation. This particular<br/>family member contains domains which are characteristic of the GAP1 subfamily of RasGAP<br/>proteins but, in contrast to the other GAP1 family members, this protein is strongly and<br/>selectively expressed in endocrine tissues. Alternatively spliced transcript variants that<br/>encode different isoforms have been described

Synonyms: RASAL
