PORIGENE RHOG Rabbit Polyclonal Antibody – TA380919S

Background:This gene encodes a member of the Rho family of small GTPases, which cycle between
inactive GDP-bound and active GTP-bound states and function as molecular switches in signal
transduction cascades. Rho proteins promote reorganization of the actin cytoskeleton and
regulate cell shape, attachment, and motility. The encoded protein facilitates translocation of
a functional guanine nucleotide exchange factor (GEF) complex from the cytoplasm to the
plasma membrane where ras-related C3 botulinum toxin substrate 1 is activated to promote
lamellipodium formation and cell migration. Two related pseudogene have been identified on
chromosomes 20 and X.

Synonyms: ARHG; MGC125835; MGC125836; OTTHUMP00000014180; OTTHUMP00000014181
