Gene Name: ring finger protein 125, E3 ubiquitin protein ligase

Database Link: Q96EQ8

Background: This gene encodes a novel E3 ubiquitin ligase that contains a RING finger domain in the N-

terminus and three zinc-binding and one ubiquitin-interacting motif in the C-terminus. As a result of myristoylation, this protein associates with membranes and is primarily localized to intracellular membrane systems. The encoded protein may function as a positive regulator in

the T-cell receptor signaling pathway.
