#### **GRIGENE** Serum Amyloid A (SAA1) Rabbit Polyclonal Antibody – TA381230

Background:This gene encodes a member of the serum amyloid A family of apolipoproteins. The encoded<br/>preproprotein is proteolytically processed to generate the mature protein. This protein is a<br/>major acute phase protein that is highly expressed in response to inflammation and tissue<br/>injury. This protein also plays an important role in HDL metabolism and cholesterol<br/>homeostasis. High levels of this protein are associated with chronic inflammatory diseases<br/>including atherosclerosis, rheumatoid arthritis, Alzheimer's disease and Crohn's disease. This<br/>protein may also be a potential biomarker for certain tumors. Alternate splicing results in<br/>multiple transcript variants that encode the same protein. A pseudogene of this gene is<br/>found on chromosome 11.

Synonyms: MGC111216; PIG4; SAA; TP53I4
