

## Product datasheet for TA381527

**Primary Antibodies** 

ICC/IF, WB

Human

Q13309

IF,1:50 - 1:200

## **SKP2 Rabbit Polyclonal Antibody**

Recommended Dilution: WB,1:500 - 1:2000

## **Product data:**

Product Type:

**Applications:** 

**Reactivity:** 

OriGene Technologies, Inc.

| Modifications:          | Unmodified   |
|-------------------------|--|
| Host:                   | Rabbit   |
| lsotype:                | IgG  |
| Clonality:              | Polyclonal   |
| Immunogen:              | A synthetic peptide of human SKP2                                |
| Formulation:            | Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.          |
| Concentration:          | lot specific   |
| Purification:           | Affinity purification  |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at -20°C. Avoid freeze / thaw cycles.                      |
| Stability:              | Shelf life: one year from despatch.                              |
| Predicted Protein Size: | 23kDa/46kDa/47kDa  |
| Gene Name:              | S-phase kinase-associated protein 2, E3 ubiquitin protein ligase |
| Database Link:          | Entrez Gene 6502 Human   |

## **GRIGENE** SKP2 Rabbit Polyclonal Antibody – TA381527

Background:This gene encodes a member of the F-box protein family which is characterized by an<br/>approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four<br/>subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in<br/>phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes:<br/>Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing<br/>either different protein-protein interaction modules or no recognizable motifs. The protein<br/>encoded by this gene belongs to the Fbls class; in addition to an F-box, this protein contains<br/>10 tandem leucine-rich repeats. This protein is an essential element of the cyclin A-CDK2 S-<br/>phase kinase. It specifically recognizes phosphorylated cyclin-dependent kinase inhibitor 1B<br/>(CDKN1B, also referred to as p27 or KIP1) predominantly in S phase and interacts with S-<br/>phase kinase-associated protein 1 (SKP1 or p19). In addition, this gene is established as a<br/>protooncogene causally involved in the pathogenesis of lymphomas. Alternative splicing of<br/>this gene generates three transcript variants encoding different isoforms.

Synonyms:

FBL1; FBXL1; FLB1; MGC1366; p45skp2
