GRIGENE SLC5A7 Rabbit Polyclonal Antibody – TA381685S

Background:This gene encodes a sodium ion- and chloride ion-dependent high-affinity transporter that
mediates choline uptake for acetylcholine synthesis in cholinergic neurons. The protein
transports choline from the extracellular space into presynaptic terminals for synthesis into
acetylcholine. Increased choline uptake results from increased density of this protein in
synaptosomal plasma membranes in response to depolarization of cholinergic terminals.
Dysfunction of cholinergic signaling has been implicated in various disorders including
depression, attention-deficit disorder, and schizophrenia. An allelic variant of this gene is
associated with autosomal dominant distal hereditary motor neuronopathy type VIIA.
Alternative splicing results in multiple transcript variants.

Synonyms: CHT; CHT1; hCHT; MGC126299; MGC126300; OTTHUMP00000203760
