| Background:             | Central component of the condensin complex, a complex required for conversion of interphase chromatin into mitotic-like condense chromosomes. The condensin complex probably introduces positive supercoils into relaxed DNA in the presence of type I topoisomerases and converts nicked DNA into positive knotted forms in the presence of type II topoisomerases. |
| Synonyms:               | CAP-E; CAPE; FLJ10093; hCAP-E; SMC2L1  |
