Background: This gene belongs to the SMC3 subfamily of SMC proteins. The encoded protein occurs in

certain cell types as either an intracellular, nuclear protein or a secreted protein. The nuclear form, known as structural maintenance of chromosomes 3, is a component of the multimeric cohesin complex that holds together sister chromatids during mitosis, enabling proper chromosome segregation. Post-translational modification of the encoded protein by the addition of chondroitin sulfate chains gives rise to the secreted proteoglycan bamacan, an

abundant basement membrane protein.

Synonyms: BAM; bamacan; BMH; CDLS3; CSPG6; HCAP; SMC3L1
