SOCS1 Rabbit Polyclonal Antibody – TA381869S

Background:This gene encodes a member of the STAT-induced STAT inhibitor (SSI), also known as
suppressor of cytokine signaling (SOCS), family. SSI family members are cytokine-inducible
negative regulators of cytokine signaling. The expression of this gene can be induced by a
subset of cytokines, including IL2, IL3 erythropoietin (EPO), CSF2/GM-CSF, and interferon (IFN)-
gamma. The protein encoded by this gene functions downstream of cytokine receptors, and
takes part in a negative feedback loop to attenuate cytokine signaling. Knockout studies in
mice suggested the role of this gene as a modulator of IFN-gamma action, which is required
for normal postnatal growth and survival.

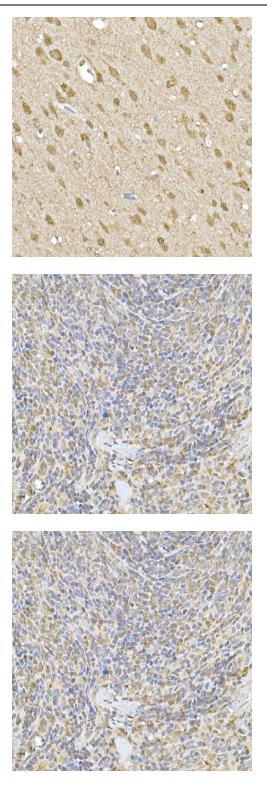

Synonyms: CIS1; Cish1; JAB; SOCS-1; SSI-1; SSI1; TIP-3; TIP3
