Synonyms:CSPS (SULT1A3) Rabbit Polyclonal Antibody - TA382192Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones,
neurotransmitters, drugs, and xenobiotic compounds. These cytosolic enzymes are different
in their tissue distributions and substrate specificities. The gene structure (number and
length of exons) is similar among family members. This gene encodes a phenol
sulfotransferase with thermolabile enzyme activity. Four sulfotransferase genes are located
on the p arm of chromosome 16; this gene and SULT1A4 arose from a segmental duplication.
This gene is the most centromeric of the four sulfotransferase genes. Read-through
transcription exists between this gene and the upstream SLX1A (SLX1 structure-specific
endonuclease subunit homolog A) gene that encodes a protein containing GIY-YIG domains.Synonyms:HAST; HAST3; M-PST; MGC117469; OTTHUMP00000045746; OTTHUMP00000045747; ST1A5;
