Background: This gene encodes a member of the small ubiquitin-related modifier (SUMO) family of

eukaryotic proteins. The encoded protein is covalently conjugated to other proteins via a post-translation modification known as sumoylation. Sumoylation may play a role in a wide variety of cellular processes, including nuclear transport, DNA replication and repair, mitosis, transcriptional regulation, and signal transduction. Alternatively spliced transcript variants

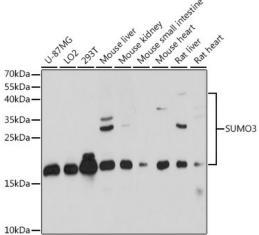

encoding distinct proteins have been described.

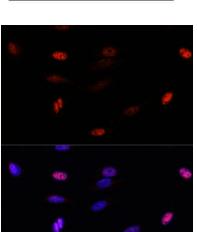

Synonyms: SMT3A; SMT3H1; SUMO-2; SUMO-3
