Gene Name:	TATA-box binding protein associated factor, RNA polymerase I subunit C
Database Link:	<u>Entrez Gene 9013 Human</u> <u>Q15572</u>
Background:	Initiation of transcription by RNA polymerase I requires the formation of a complex composed of the TATA-binding protein (TBP) and three TBP-associated factors (TAFs) specific for RNA polymerase I. This complex, known as SL1, binds to the core promoter of ribosomal RNA genes to position the polymerase properly and acts as a channel for regulatory signals. This gene encodes the largest SL1-specific TAF. Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
Synonyms:	MGC:39976; SL1; TAFI95; TAFI110
