CRIGENE TRBP (TARBP2) Rabbit Polyclonal Antibody – TA382304

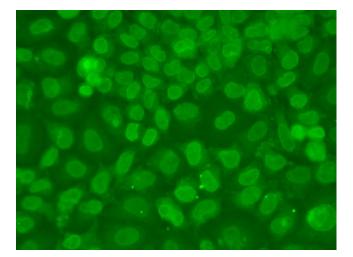

Background:HIV-1, the causative agent of acquired immunodeficiency syndrome (AIDS), contains an RNA
genome that produces a chromosomally integrated DNA during the replicative cycle.
Activation of HIV-1 gene expression by the transactivator Tat is dependent on an RNA
regulatory element (TAR) located downstream of the transcription initiation site. The protein
encoded by this gene binds between the bulge and the loop of the HIV-1 TAR RNA regulatory
element and activates HIV-1 gene expression in synergy with the viral Tat protein. Alternative
splicing results in multiple transcript variants encoding different isoforms. This gene also has
a pseudogene.

Synonyms: MGC124970; Prbp
