Background: The protein encoded by this gene belongs to the thrombospondin family. It is a disulfide-

 $linked\ homotrimeric\ glycoprotein\ that\ mediates\ cell-to-cell\ and\ cell-to-matrix\ interactions.$

This protein has been shown to function as a potent inhibitor of tumor growth and

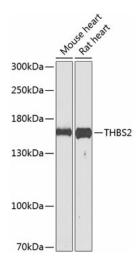

angiogenesis. Studies of the mouse counterpart suggest that this protein may modulate the cell surface properties of mesenchymal cells and be involved in cell adhesion and migration.

Synonyms: TSP2
