CRIGENE TLR6 Rabbit Polyclonal Antibody – TA382571S

Background:The protein encoded by this gene is a member of the Toll-like receptor (TLR) family which
plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are
highly conserved from Drosophila to humans and share structural and functional similarities.
They recognize pathogen-associated molecular patterns (PAMPs) that are expressed on
infectious agents, and mediate the production of cytokines necessary for the development of
effective immunity. The various TLRs exhibit different patterns of expression. This receptor
functionally interacts with toll-like receptor 2 to mediate cellular response to bacterial
lipoproteins. A Ser249Pro polymorphism in the extracellular domain of the encoded protein
may be associated with an increased of asthma is some populations.
