#### **GRIGENE** TNXB Rabbit Polyclonal Antibody – TA382691S

Background:This gene encodes a member of the tenascin family of extracellular matrix glycoproteins. The<br/>tenascins have anti-adhesive effects, as opposed to fibronectin which is adhesive. This<br/>protein is thought to function in matrix maturation during wound healing, and its deficiency<br/>has been associated with the connective tissue disorder Ehlers-Danlos syndrome. This gene<br/>localizes to the major histocompatibility complex (MHC) class III region on chromosome 6. It is<br/>one of four genes in this cluster which have been duplicated. The duplicated copy of this gene<br/>is incomplete and is a pseudogene which is transcribed but does not encode a protein. The<br/>structure of this gene is unusual in that it overlaps the CREBL1 and CYP21A2 genes at its 5'<br/>and 3' ends, respectively. Multiple transcript variants encoding different isoforms have been<br/>found for this gene.

Synonyms:

hexabrachion-like; HXBL; tenascin-X; TENX; TN-X; TNX; TNXB1; TNXB2; TNXBS; XB; XBS
