GRIGENE TSLP Rabbit Polyclonal Antibody – TA382896

TSLP

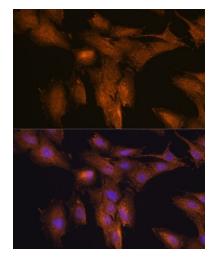

Background:This gene encodes a hemopoietic cytokine proposed to signal through a heterodimeric
receptor complex composed of the thymic stromal lymphopoietin receptor and the IL-7R
alpha chain. It mainly impacts myeloid cells and induces the release of T cell-attracting
chemokines from monocytes and enhances the maturation of CD11c(+) dendritic cells. The
protein promotes T helper type 2 (TH2) cell responses that are associated with immunity in
various inflammatory diseases, including asthma, allergic inflammation and chronic
obstructive pulmonary disease. The protein is therefore considered a potential therapeutic
target for the treatment of such diseases. Alternative splicing of this gene results in multiple
transcript variants.
