GRIGENE UBE2D2 Rabbit Polyclonal Antibody – TA383006

Background:Regulated degradation of misfolded, damaged or short-lived proteins in eukaryotes occurs
via the ubiquitin (Ub)-proteasome system (UPS). An integral part of the UPS system is the
ubiquitination of target proteins and covalent linkage of Ub-containing proteins to form
polymeric chains, marking them as targets for 26S proteasome-mediated degradation.
Ubiquitination of proteins is mediated by a cascade of enzymes which includes E1 (ubiquitin
activating), E2 (ubiquitin conjugating), and E3 (ubiquitin ligases) enzymes. This gene encodes a
member of the E2 enzyme family. Substrates of this enzyme include the tumor suppressor
protein p53 and peroxisomal biogenesis factor 5 (PEX5). Alternative splicing results in
multiple transcript variants of this gene.
