GRIGENE VAMP2 Rabbit Polyclonal Antibody – TA383186

Background:The protein encoded by this gene is a member of the vesicle-associated membrane protein
(VAMP)/synaptobrevin family. Synaptobrevins/VAMPs, syntaxins, and the 25-kD
synaptosomal-associated protein SNAP25 are the main components of a protein complex
involved in the docking and/or fusion of synaptic vesicles with the presynaptic membrane.
This gene is thought to participate in neurotransmitter release at a step between docking and
fusion. The protein forms a stable complex with syntaxin, synaptosomal-associated protein,
25 kD, and synaptotagmin. It also forms a distinct complex with synaptophysin. It is a likely
candidate gene for familial infantile myasthenia (FIMG) because of its map location and
because it encodes a synaptic vesicle protein of the type that has been implicated in the
pathogenesis of FIMG.

Synonyms:

FLJ11460; SYB2; Synaptobrevin-2; VAMP-2
