GRIGENE TAZ (WWTR1) Rabbit Polyclonal Antibody – TA383364

Background:Transcriptional coactivator which acts as a downstream regulatory target in the Hippo
signaling pathway that plays a pivotal role in organ size control and tumor suppression by
restricting proliferation and promoting apoptosis. The core of this pathway is composed of a
kinase cascade wherein STK3/MST2 and STK4/MST1, in complex with its regulatory protein
SAV1, phosphorylates and activates LATS1/2 in complex with its regulatory protein MOB1,
which in turn phosphorylates and inactivates YAP1 oncoprotein and WWTR1/TAZ. WWTR1
enhances PAX8 and NKX2-1/TTF1-dependent gene activation. In conjunction with YAP1,
involved in the regulation of TGFB1-dependent SMAD2 and SMAD3 nuclear accumulation.
Plays a key role in coupling SMADs to the transcriptional machinery such as the mediator
complex. Regulates embryonic stem-cell self-renewal, promotes cell proliferation and
epithelial-mesenchymal transition.
