#### **GRIGENE** YB1 (YBX1) Rabbit Polyclonal Antibody – TA383404S

Background:This gene encodes a highly conserved cold shock domain protein that has broad nucleic acid<br/>binding properties. The encoded protein functions as both a DNA and RNA binding protein<br/>and has been implicated in numerous cellular processes including regulation of transcription<br/>and translation, pre-mRNA splicing, DNA reparation and mRNA packaging. This protein is also<br/>a component of messenger ribonucleoprotein (mRNP) complexes and may have a role in<br/>microRNA processing. This protein can be secreted through non-classical pathways and<br/>functions as an extracellular mitogen. Aberrant expression of the gene is associated with<br/>cancer proliferation in numerous tissues. This gene may be a prognostic marker for poor<br/>outcome and drug resistance in certain cancers. Alternate splicing results in multiple<br/>transcript variants. Pseudogenes of this gene are found on multiple chromosomes.

Synonyms: BP-8; CBF-A; CSDA2; CSDB; DBPB; EFI-A; MDR-NF1; MGC104858; MGC110976; MGC117250; NSEP-1; NSEP1; YB-1; YB1
