Background: Swiss-Prot Acc.P68133.Actins are highly conserved proteins that are involved in various types

of cell motility and are ubiquitously expressed in all eukaryotic cells. Miscellaneous In vertebrates 3 main groups of actin isoforms, alpha, beta and gamma have been identified. The alpha actins are found in muscle tissues and are a major constituent of the contractile apparatus. The beta and gamma actins coexist in most cell types as components of the

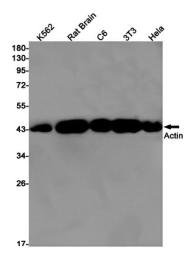

cytoskeleton and as mediators of internal cell motility.

Synonyms: ACTA; Alpha-actin-1; ASMA; CFTD; CFTD1; CFTDM; MPFD; NEM1; NEM2; NEM3
