| Background: | Swiss-Prot Acc.Q16611.Plays a role in the mitochondrial apoptotic process. Upon arrival of cell death signals, promotes mitochondrial outer membrane (MOM) permeabilization by oligomerizing to form pores within the MOM. This releases apoptogenic factors into the cytosol, including cytochrome c, promoting the activation of caspase 9 which in turn processes and activates the effector caspases. |
| Synonyms: | BAK; BAK-LIKE; Bcl2-L-7; BCL2L7; CDN1; MGC3887; MGC117255 |
