CDK4 Rabbit Monoclonal Antibody [Clone ID: R04-415] – TA383968

Background:Swiss-Prot Acc.P11802.Ser/Thr-kinase component of cyclin D-CDK4 (DC) complexes that
phosphorylate and inhibit members of the retinoblastoma (RB) protein family including RB1
and regulate the cell-cycle during G1/S transition. Phosphorylation of RB1 allows dissociation
of the transcription factor E2F from the RB/E2F complexes and the subsequent transcription
of E2F target genes which are responsible for the progression through the G1 phase.
Hypophosphorylates RB1 in early G1 phase. Cyclin D-CDK4 complexes are major integrators
of various mitogenenic and antimitogenic signals. Also phosphorylates SMAD3 in a cell-cycle-
dependent manner and represses its transcriptional activity. Component of the ternary
complex, cyclin D/CDK4/CDKN1B, required for nuclear translocation and activity of the cyclin
D-CDK4 complex.
