Q9Y624

Background: Swiss-Prot Acc.Q9Y624.Seems to plays a role in epithelial tight junction formation. Appears

early in primordial forms of cell junctions and recruits PARD3. The association of the PARD6-PARD3 complex may prevent the interaction of PARD3 with JAM1, thereby preventing tight junction assembly (By similarity). Plays a role in regulating monocyte transmigration involved

in integrity of epithelial barrier. Involved in platelet activation. In case of orthoreovirus

infection, serves as receptor for the virus.

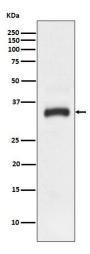

Synonyms: CD321; JAM; JAM-1; JAM-A; JAM1; JAMA; JCAM; KAT; OTTHUMP00000027880;
