CD117 Rabbit Polyclonal Antibody – TA384610M

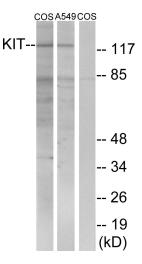

Background:Swiss-Prot Acc.P10721.Tyrosine-protein kinase that acts as cell-surface receptor for the
cytokine KITLG/SCF and plays an essential role in the regulation of cell survival and
proliferation, hematopoiesis, stem cell maintenance, gametogenesis, mast cell development,
migration and function, and in melanogenesis. In response to KITLG/SCF binding, KIT can
activate several signaling pathways. Phosphorylates PIK3R1, PLCG1, SH2B2/APS and CBL.
Activates the AKT1 signaling pathway by phosphorylation of PIK3R1, the regulatory subunit of
phosphatidylinositol 3-kinase. Activated KIT also transmits signals via GRB2 and activation of
RAS, RAF1 and the MAP kinases MAPK1/ERK2 and/or MAPK3/ERK1. Promotes activation of
STAT family members STAT1, STAT3, STAT5A and STAT5B. Activation of PLCG1 leads to the
production of the cellular signaling molecules diacylglycerol and inositol 1,4,5-trisphosphate.
KIT signaling is modulated by protein phosphatases, and by rapid internalization and
degradation of the receptor. Activated KIT promotes phosphorylation of the protein
phosphatases PTPN6/SHP-1 and PTPRU, and of the transcription factors STAT1, STAT3,

MAPK1/ERK2 and/or MAPK3/ERK1, PLCG1, SRC and SHC1.

STAT5A and STAT5B. Promotes phosphorylation of PIK3R1, CBL, CRK (isoform Crk-II), LYN,

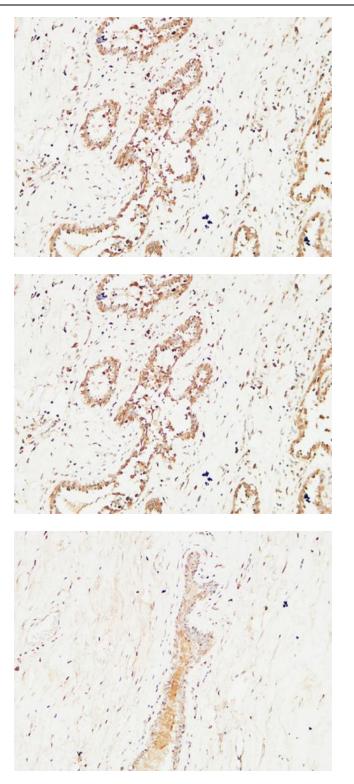

Synonyms: C-Kit; CD117; PBT; SCFR
