Serigene PAK3 Rabbit Monoclonal Antibody [Clone ID: R04-2A4] – TA384923M

Background:Swiss-Prot Acc.O75914.Serine/threonine protein kinase that plays a role in a variety of
different signaling pathways including cytoskeleton regulation, cell migration, or cell cycle
regulation. Plays a role in dendrite spine morphogenesis as well as synapse formation and
plasticity. Acts as downstream effector of the small GTPases CDC42 and RAC1. Activation by
the binding of active CDC42 and RAC1 results in a conformational change and a subsequent
autophosphorylation on several serine and/or threonine residues. Phosphorylates MAPK4
and MAPK6 and activates the downstream target MAPKAPK5, a regulator of F-actin
polymerization and cell migration. Additionally, phosphorylates TNNI3/troponin I to modulate
calcium sensitivity and relaxation kinetics of thin myofilaments. May also be involved in early
neuronal development.
