P08559

Background: Swiss-Prot Acc.P08559.The PDH complex is composed of multiple copies of three enzymatic

components: pyruvate dehydrogenase (E1), dihydrolipoamide acetyltransferase (E2) and lipoamide dehydrogenase (E3). Catalyzes the removal of CO2 from pyruvate. Mutations in the

 α subunits of pyruvate dehydrogenase (E1) lead to congenital defects that are usually

associated with lactic acidosis, neurodegeneration and early death.
