Background: Swiss-Prot Acc.P35354.Converts arachidonate to prostaglandin H2 (PGH2), a committed step

in prostanoid synthesis (PubMed:26859324, PubMed:27226593). Constitutively expressed in some tissues in physiological conditions, such as the endothelium, kidney and brain, and in

pathological conditions, such as in cancer. PTGS2 is responsible for production of

inflammatory prostaglandins. Up-regulation of PTGS2 is also associated with increased cell adhesion, phenotypic changes, resistance to apoptosis and tumor angiogenesis. In cancer cells, PTGS2 is a key step in the production of prostaglandin E2 (PGE2), which plays important

roles in modulating motility, proliferation and resistance to apoptosis.

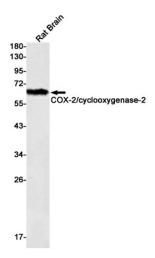

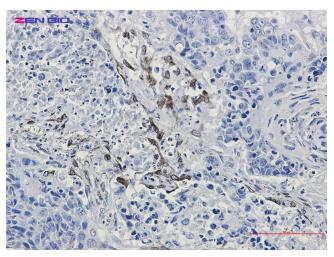

Synonyms:

COX-2; COX2; Cyclooxygenase-2; GRIPGHS; hCox-2; PGG/HS; PGHS-2; PHS-2
