Background:	Swiss-Prot Acc.P27348.Adapter protein implicated in the regulation of a large spectrum of both general and specialized signaling pathways. Binds to a large number of partners, usually by recognition of a phosphoserine or phosphothreonine motif. Binding generally results in the modulation of the activity of the binding partner. Negatively regulates the kinase activity of PDPK1.
Synonyms:	1C5; 14-3-3; HS1; OTTHUMP00000165887
