Background: Involved in the homologous recombination repair (HRR) pathway of double-stranded DNA

breaks arising during DNA replication or induced by DNA-damaging agents. Bind to single-stranded DNA (ssDNA) and has DNA-dependent ATPase activity. Part of the Rad21 paralog protein complex BCDX2 which acts in the BRCA1-BRCA2-dependent HR pathway. Upon DNA

damage, BCDX2 acts downstream of BRCA2 recruitment and upstream of RAD51

recruitment. BCDX2 binds predominantly to the intersection of the four duplex arms of the Holliday junction and to junction of replication forks. The BCDX2 complex was originally reported to bind single-stranded DNA, single-stranded gaps in duplex DNA and specifically to

nicks in duplex DNA. Involved in telomere maintenance. The BCDX2 subcomplex

XRCC2:RAD51D can stimulate Holliday junction resolution by BLM.
