Immunohistochemistry of paraffin-embedded

Immunohistochemistry of paraffin-embedded human duodenal tissue using [TA388585] at dilution of 1:100

IHC image of [TA388585] diluted at 1:293 and staining in paraffin-embedded human colon cancer performed on a Leica Bond™ system. After dewaxing and hydration, antigen retrieval was mediated by high pressure in a citrate buffer (pH 6.0). Section was blocked with 10% normal goat serum 30min at RT. Then primary antibody (1% BSA) was incubated at 4°C overnight. The primary is detected by a biotinylated secondary antibody and visualized using an HRP conjugated SP system.
