Background:	This gene encodes a member of the natural killer cell receptor C-type lectin family. The encoded protein inhibits osteoclast formation and contains a transmembrane domain near the N-terminus as well as the C-type lectin-like extracellular domain. Several alternatively spliced transcript variants have been identified for this gene.
Synonyms:	C-type lectin domain family 2 member D □ Lectin-like NK cell receptor □ LLT-1 □ Osteoclast inhibitory lectin
