Background:	Integrin alpha-3/beta-1 is a receptor for fibronectin, laminin, collagen, epiligrin, thrombospondin and CSPG4. Integrin alpha-3/beta-1 provides a docking site for FAP (seprase) at invadopodia plasma membranes in a collagen-dependent manner and hence may participate in the adhesion, formation of invadopodia and matrix degradation processes, promoting cell invasion. Alpha-3/beta-1 may mediate with LGALS3 the stimulation by CSPG4 of endothelial cells migration.
Synonyms:	CD49 antigen-like family member C; CD_antigen: CD49c; FRP-2; Galactoprotein B3; GAPB3; Integrin alpha-3; Integrin alpha-3 heavy chain; Integrin alpha-3 light chain; ITGA3; MSK18; VLA-3 subunit alpha
