| Product Type:           | Primary Antibodies   |
|-------------------------|--|
| Applications:           | WB   |
| Recommended Dilution:   | WB: 1:5000~1:10000   |
| Reactivity:             | Human, Mouse   |
| Host:                   | Rabbit   |
| lsotype:                | IgG  |
| Clonality:              | Polyclonal   |
| Immunogen:              | Recombinant protein of human CD158a.   |
| Specificity:            | CD158a polyclonal antibody detects endogenous levels of CD158a protein.                  |
| Formulation:            | Rabbit lgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2.                  |
| Concentration:          | 1mg/ml   |
| Conjugation:            | Unconjugated   |
| Storage:                | Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze-thaw cycles. |
| Stability:              | 1 year   |
| Predicted Protein Size: | ~ 49 kDa   |
| Gene Name:              | killer cell immunoglobulin like receptor, two Ig domains and long cytoplasmic tail 1     |
| Database Link:          | <u>Entrez Gene 3802 Human</u><br><u>P43626</u>   |

|             | KIR2DL1 Rabbit Polyclonal Antibody – TA392423M  |
|-------------|---|
| Background: | NKAT (NK-associated transcripts) gene products, known as killer immunoglobulin-like receptors or KIRs, downregulate the cytotoxicity of NK cells upon recognition of specific class I major histocompatibility complex (MHC) molecules on target cells. This family of receptors is characterized by an extracellular region with two to three immunoglobulin-superfamily domains and a cytoplasmic domain with an antigen receptor activation motif (ARAM). KIRs and other inhibitory receptors also possess a common cytoplasmic sequence (I/VxYxxL/V) known as an ITIM (immunoreceptor tyrosine-based inhibitory motif). The human inhibitory natural killer cell immunoglobulin-like receptor 2DL1, also designated KIR2DL1, CL-42, NKAT1, P58.1 or CD158a long form, is a 348 amino acid type I transmembrane protein. KIR2DL1 can bind human leukocyte antigen-C (HLA-C) via both polar and hydrophobic interactions through Met 44 in a binding pocket that coordinates Lys 80 of HLA-C. |
| Synonyms:   | CD158 antigen-like family member A; CD158A; CD158a; Killer cell immunoglobulin-like<br>receptor 2DL1; KIR2DL1; Natural killer-associated transcript 1; NKAT-1; NKAT1; p58 natural<br>killer cell receptor clones CL-42/47.11; p58 NK receptor CL-42/47.11; p58.1 MHC class-l-<br>specific NK receptor   |
| Note:       | For research use only, not for use in diagnostic procedure.   |
