

Product datasheet for TA392500

ROR gamma (RORC) Rabbit Polyclonal Antibody

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	WB: 1:1000~1:2000 IHC: 1:50~1:200
Reactivity:	Human
Host:	Rabbit
lsotype:	lgG
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to Human RORy.
Specificity:	RORy polyclonal antibody detects endogenous levels of RORy protein.
Formulation:	Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2
Concentration:	1mg/ml
Conjugation:	Unconjugated
Storage:	Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze-thaw cycles.
Stability:	1 year
Predicted Protein Size:	~ 60 kDa
Gene Name:	RAR related orphan receptor C
Database Link:	<u>Entrez Gene 6097 Human</u> <u>P51449</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

CRIGENE ROR gamma (RORC) Rabbit Polyclonal Antibody – TA392500

Background:The nuclear orphan receptors RORα and RORg are members of the nuclear hormone
receptor superfamily. Members of this family acts by directly associating with DNA sequences
known as hormone response elements (HREs) and typically bind DNA as either homo- or
heterodimers. RORα and RORg are unique in that they bind DNA as monomers. RORα has
multiple isoforms that share common DNA and putative ligand-binding domains, but differ in
their amino terminal domains, which are generated by alternative RNA processing. RORg
comprises a 560 amino acid protein that shares 50% amino acid identity with RORα and is
most highly expressed in skeletal muscle. Although these proteins are considered "orphan
receptors," due to a lack of defined ligands, experimental evidence has shown that melatonin
may be the natural ligand for these nuclear receptors. The gene encoding RORα maps to
chromosome 15q22.2 and the gene encoding RORg maps to chromosome 1q21.3.

Synonyms: NR1F3; Nuclear receptor ROR-gamma; Nuclear receptor RZR-gamma; Nuclear receptor subfamily 1 group F member 3; RAR-related orphan receptor C; Retinoid-related orphan receptor-gamma; RORC; RORG; RZRG

Note: For research use only, not for use in diagnostic procedure.
