

## **Product datasheet for TA392554**

## **ITLN1 Rabbit Polyclonal Antibody**

## **Product data:**

**Product Type:** Primary Antibodies

Applications: WB

**Recommended Dilution:** WB: 1:1000~1:2000 IHC: 1:50~1:200

Reactivity: Human

Host: Rabbit

Isotype: IgG

**Clonality:** Polyclonal

**Immunogen:** Synthetic peptide, corresponding to Human LFR.

**Specificity:** LFR polyclonal antibody detects endogenous levels of LFR protein.

Formulation: Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

Concentration: 1mg/ml

Conjugation: Unconjugated

Storage: Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze-thaw cycles.

Stability: 1 year

Predicted Protein Size: ~ 34 kDa

Gene Name: intelectin 1

**Database Link:** Entrez Gene 55600 Human

Background:

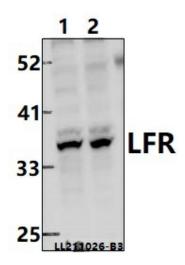

Intelectin-1, also known as ITLN1, INTL, Omentin or LFR, is a 313 amino acid protein that contains one fibrinogen C-terminal domain and is either secreted or lipid-anchored to the cell membrane. Highly expressed in small intestine and adipose tissue and present at lower levels in testis, heart, pancreas, colon and skeletal muscle, Intelectin-1 exists as a disulfide-linked homotrimer that functions to enhance Insulin-stimulated glucose uptake and is also thought to participate in host defense against miccroorganisms. In addition to its roles in glucose regulation and immune system function, Intelectin-1 may also be involved in iron metabolism and obesity regulation in adults. Intelectin-2 shares 85% amino acid identity with Intelectin-1 and, like Intelectin-1, is a secreted protein that contains one fibrinogen C-terminal domain and is thought to play a role in the host defense system. While Intelectin-1 is present in a variety of tissues, Intelectin-2 exists only in the small intestine.

**Synonyms:** Endothelial lectin HL-1; Galactofuranose-binding lectin; Intelectin-1; Intestinal lactoferrin

receptor; ITLN-1; Omentin

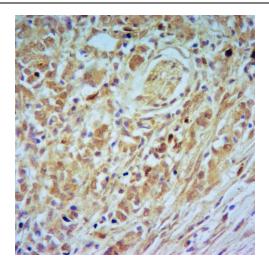

**Note:** For research use only, not for use in diagnostic procedure.
