Background:	Mu Calpain, and m calpain, also known as Calpain 2, are intracellular, calcium dependent cysteine proteases. Mu calpain has a micromolar sensitivity (thus the mu) as compared to the millimolar calcium sensitivity of m calpain. Both Calpains 1 and 2 are composed of an 80 kD subunit and a 30 kD subunit. Whereas the 30 kDa subunit is shared by both enzymes, the larger catalytic subunits are different and exhibit the distinct Ca ⁺⁺ requirements that are suggested by their names.
Synonyms:	Calcium-activated neutral proteinase 2; Calpain-2 catalytic subunit; Calpain-2 large subunit; Calpain large polypeptide L2; Calpain M-type; CANP 2; CANPL2; CAPN2; M-calpain; Millimolar-calpain
