

Product datasheet for TA392745M

Myeloid zinc finger 1 (MZF1) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies Applications: WB Recommended Dilution: WB: 1:500~1:1000 **Reactivity:** Human, Mouse, Rat Host: Rabbit Isotype: lgG **Clonality:** Polyclonal Immunogen: Synthetic peptide, corresponding to amino acids 5-55 of Human MZF-1. Specificity: MZF-1 (D10) pAb detects endogenous levels of MZF-1 protein. Formulation: Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2 **Concentration:** 1mg/ml **Conjugation:** Unconjugated Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze-thaw cycles. Storage: Stability: 1 year Predicted Protein Size: ~ 82 kDa Gene Name: myeloid zinc finger 1 Entrez Gene 7593 Human Database Link: P28698 **Background:** Zinc finger genes encode metal-binding proteins are transcriptional regulators of other genes. Myeloid zinc finger 1 (MZF-1), also designated zinc finger protein 42, and transcription factor ZBP-89, also designated zinc finger protein 148, belong to the Krüppel C2H2-type zincfinger protein family. The gene encoding for the MZF-1 protein maps to chromosome 19q13.43, while the gene encoding for ZBP-89 is localized on chromosome 3q21.2. These proteins are nuclear proteins involved in the regulation of transcriptional events. MZF-1 regulates transcription during hemopoietic development and plays a role in myeloid cell differentiation. It regulates the CD34 promoter in a tissue-specific manner. MZF-1 and FHL3 can form a complex of high molecular mass with other proteins in the nucleus. MZF-1 is induced by retinoic acid and is primarily expressed in differentiating myeloid cells.
