### CRIGENE DNA Polymerase lambda (POLL) Rabbit Polyclonal Antibody – TA392763

- Background:DNA replication, recombination and repair, all of which are necessary for genomic stability,<br/>require the presence of exonucleases. In DNA replication, these enzymes are involved in the<br/>processing of Okazaki fragments, whereas in DNA repair, they function to excise damaged<br/>DNA fragments and correct recombinational mismatches. These exonucleases include the<br/>family of DNA polymerases. DNA pol α, β, δ, and ε are involved in DNA replication and repair.<br/>DNA pol δ and DNA pol e are multisubunit enzymes, with DNA pol δ consisting of two<br/>subunits: p125, which interacts with the sliding DNA clamp protein PCNA; and p50. The<br/>nuclear-encoded DNA pol γ is the only DNA polymerase required for the replication of the<br/>mitochondrial DNA. DNA pol ζ is ubiquitously expressed in various tissues and mediates the<br/>cellular mechanism of damage induced mutagenesis. DNA pol θ is a DNA polymerasehelicase<br/>that binds ATP and is involved in the repair of interstrand crosslinks.
- Synonyms:DNA polymerase beta-2; DNA polymerase kappa; DNA polymerase lambda; Pol beta2; POLL;<br/>Pol Lambda
