Database Link:	Entrez Gene 79934 Human Q96D53
Background:	Atypical kinase involved in the biosynthesis of coenzyme Q, also named ubiquinone, an essential lipid-soluble electron transporter for aerobic cellular respiration. Its substrate specificity is unclear: does not show any protein kinase activity. Probably acts as a small molecule kinase, possibly a lipid kinase that phosphorylates a prenyl lipid in the ubiquinone biosynthesis pathway. Required for podocyte migration.
Synonyms:	AarF domain-containing protein kinase 4; ADCK4; Atypical kinase COQ8B, mitochondrial; Coenzyme Q protein 8B; COQ8B
Note:	For research use only, not for use in diagnostic procedure.
