## Phospho-PKC alpha (PRKCA) Rabbit Polyclonal Antibody

## **Product data:**

**Product Type:** Primary Antibodies

Applications: WB

Recommended Dilution: WB,1:2000 - 1:8000

Reactivity: Human
Host: Rabbit
Isotype: IgG

Clonality: Polyclonal

**Immunogen:** A synthetic phosphorylated peptide around T638 of human PKC alpha.

**Formulation:** Buffer: PBS with 0.05% proclin300,0.05% BSA,50% glycerol,pH7.3.

**Concentration:** lot specific

**Purification:** Affinity purification

**Conjugation:** Unconjugated

Storage: Store at -20°C. Avoid freeze / thaw cycles.

Stability: Stable for 12 months from date of receipt.

**Predicted Protein Size:** 77kDa - Observed MW: 80kDa

Gene Name: protein kinase C alpha

Database Link: Entrez Gene 5578 Human

P17252

**Background:** Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be

activated by calcium and the second messenger diacylglycerol. PKC family members phosphorylate a wide variety of protein targets and are known to be involved in diverse cellular signaling pathways. PKC family members also serve as major receptors for phorbol esters, a class of tumor promoters. Each member of the PKC family has a specific expression profile and is believed to play a distinct role in cells. The protein encoded by this gene is one of the PKC family members. This kinase has been reported to play roles in many different cellular processes, such as cell adhesion, cell transformation, cell cycle checkpoint, and cell volume control. Knockout studies in mice suggest that this kinase may be a fundamental

regulator of cardiac contractility and Ca(2+) handling in myocytes.

Synonyms:

AAG6; PKC-alpha; PKCA; PKCalpha; PKCI+/-; PRKACA
