Before opening the tube cap, centrifuge the sample tube at 5000g for 3-5min at room temperature to ensure the lyophilized sample settles down at the bottom of the tube.2. Calculate the volume for reconstitution (in μL) using the formula: $[\text{Quantity (mg)}/\text{Concentration (mg/mL)}] \times 1000$3. Dissolve the lyophilized protein sample in sterile water based on the calculated volume (μL) After adding sterile water, cover the lid and mix by gently tapping the tube 5-10 times. Note: Do not vortex or vigorously pipette the sample.
