Background:	The gene is part of a 3-member transmembrane receptor kinase receptor family with a processed pseudogene distal on chromosome 15. The encoded protein is activated by the products of the growth arrest-specific gene 6 and protein S genes and is involved in controlling cell survival and proliferation, spermatogenesis, immunoregulation and phagocytosis. The encoded protein has also been identified as a cell entry factor for Ebola and Marburg viruses. [provided by RefSeq]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TYRO3 ([RC208260], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TYRO3. Positive lysates [LY401899] (100ug) and [LC401899] (20ug) can be purchased separately from OriGene.

Immunoprecipitation (IP) of TYRO3 by using TrueMab monoclonal anti-TYRO3 antibodies (Negative control: IP without adding anti-TYRO3 antibody.). For each experiment, 500ul of DDK tagged TYRO3 overexpression lysates (at 1:5 dilution with HEK293T lysate), 2ug of anti-TYRO3 antibody and 20ul (0.1mg) of goat anti-mouse conjugated magnetic beads were mixed and incubated overnight. After extensive wash to remove any non-specific binding, the immuno-precipitated products were analyzed with rabbit anti-DDK polyclonal antibody.
