# Product datasheet for TA500429BM

### B Raf (BRAF) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI4A5]

#### **Product data:**

| Product Type:           | Primary Antibodies  |
|-------------------------|---|
| Clone Name:             | OTI4A5  |
| Applications:           | ELISA, IP, WB   |
| Recommended Dilution:   | WB 1:2000   |
| Reactivity:             | Human, Mouse, Rat   |
| Host:                   | Mouse   |
| lsotype:                | lgG2a   |
| Clonality:              | Monoclonal  |
| Immunogen:              | Full-length protein expressed in 293T cell transfected with human BRAF expression vector                        |
| Formulation:            | PBS (pH 7.3) containing 1% BSA, 50% glycerol.   |
| Concentration:          | 0.5 mg/ml   |
| Purification:           | Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography<br>(protein A/G)    |
| Conjugation:            | HRP   |
| Storage:                | Store at -20°C as received.   |
| Stability:              | Stable for 12 months from date of receipt.  |
| Predicted Protein Size: | 84.4 kDa  |
| Gene Name:              | B-Raf proto-oncogene, serine/threonine kinase   |
| Database Link:          | <u>NP_004324</u><br><u>Entrez Gene 109880 MouseEntrez Gene 114486 RatEntrez Gene 673 Human</u><br><u>P15056</u> |

|                   | Raf (BRAF) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI4A5] – TA500429BM   |
|-------------------|---|
| Background:       | This gene encodes a protein belonging to the raf/mil family of serine/threonine protein kinases. This protein plays a role in regulating the MAP kinase/ERKs signaling pathway, which affects cell division, differentiation, and secretion. Mutations in this gene are associated with cardiofaciocutaneous syndrome, a disease characterized by heart defects, mental retardation and a distinctive facial appearance. Mutations in this gene have also been associated with various cancers, including non-Hodgkin lymphoma, colorectal cancer, malignant melanoma, thyroid carcinoma, non-small cell lung carcinoma, and adenocarcinoma of lung. A pseudogene, which is located on chromosome X, has been identified for this gene. |
| Synonyms:         | B-raf; B-RAF1; BRAF1; NS7; RAFB1  |
| Protein Families: | Druggable Genome, Protein Kinase  |
| Protein Pathways: | Acute myeloid leukemia, Bladder cancer, Chemokine signaling pathway, Chronic myeloid<br>leukemia, Colorectal cancer, Endometrial cancer, ErbB signaling pathway, Focal adhesion,<br>Glioma, Insulin signaling pathway, Long-term depression, Long-term potentiation, MAPK<br>signaling pathway, Melanoma, mTOR signaling pathway, Natural killer cell mediated<br>cytotoxicity, Neurotrophin signaling pathway, Non-small cell lung cancer, Pancreatic cancer,<br>Pathways in cancer, Progesterone-mediated oocyte maturation, Prostate cancer, Regulation<br>of actin cytoskeleton, Renal cell carcinoma, Thyroid cancer, Vascular smooth muscle<br>contraction  |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY BRAF ([RC211013], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-BRAF (1:500).

Standard curve for ELISA analysis with BRAF recombinant protein (dilution range from 0.8ng/ml to 600ng/ml) using BRAF Capture Antibody (Cat# [TA500429]/[TA500462]) at 5ug/ml and HRP conjugated BRAF Detection mAb (Cat# [TA500438]) at 0.03ug/ml.

Immunoprecipitation (IP) of BRAF by using TrueMab monoclonal anti-BRAF antibodies (Negative control: IP without adding anti-BRAF antibody.). For each experiment, 500ul of DDK tagged BRAF overexpression lysates (at 1:5 dilution with HEK293T lysate), 2ug of anti-BRAF antibody and 20ul (0.1mg) of goat anti-mouse conjugated magnetic beads were mixed and incubated overnight. After extensive wash to remove any non-specific binding, the immunoprecipitated products were analyzed with rabbit anti-DDK polyclonal antibody.
