Background:	This gene, isolated using the differential display method to detect tissue-specific genes, is specifically expressed in kidney and liver. The encoded protein shows amino acid sequence similarity to N-acetyltransferases. A similar protein in Xenopus affects cell adhesion and gastrulation movements, and may be localized in the secretory pathway. A highly similar paralog is found in a cluster with this gene.
Synonyms:	ATase2; CCNAT; CML1; GLA; Hcml1; TSC501; TSC510

Protein Families:

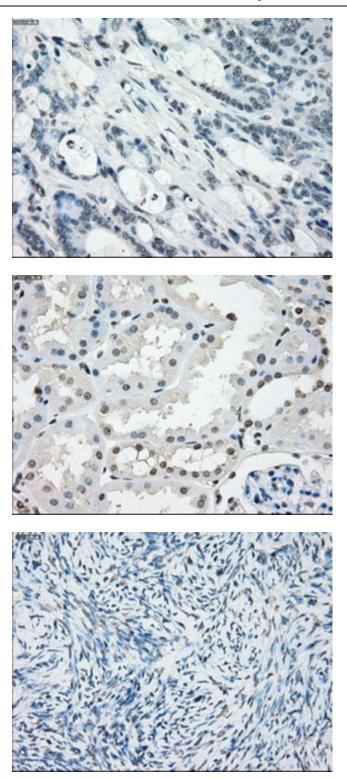

Transmembrane
